Alphatron Marine Poland

The total solution to your marine electronics needs

www.alphatronpoland.pl

About us

Alphatron Marine Poland is an exclusive representative for Alphatron Marine, Japan Radio Company (JRC) and Gerhard D. Wempe in the market area of Poland. To be able to deliver complex solutions to our clients, we cooperate with many leading manufacturers and their distributors around the world.

We employ a team of experts who have been closely linked to the marine market for many years. They are happy to share their knowledge and professional advice in order to choose, install and properly use of the maritime equipment. We are focused on sustaining long-term relations with our business partners.

Our offer is aimed at entities related to the maritime industry such as shipyards and ship-owners, as well as fishing, navy, coast guard and SAR vessels' managements.

Service of marine electronics

The Service Department handles installation, commissioning and service of marine navigation equipment as well as internal and external communication systems. The highest quality of our services has been confirmed by the major classification societies such as Bureau Veritas, ClassNK, DNV GL, Lloyd Register, Polish Register of Shipping (PRS). We are authorized to carry out periodic surveys of GMDSS, VDR, AIS, EPIRB, SART, SSAS on the vessels operating under their supervision.

ECDIS Type-Specific Training Centre

We train and certify the captains and watch-keeping officers according to the requirements. The courses are conducted by our certified ECDIS trainers (incl. experienced master mariner and deck officer). This training may take place on board a vessel worldwide together with installation of JRC ECDIS system or at a location of choice in combination with our mobile classroom.

Sales of marine electronics

The Sales Team takes care of selling spare parts, single units as well as complete bridge systems, for both newbuildings and retrofits. They search for optimum solutions in order to present a tailored offer to our customers.

Engineering department

Our designers specialize in preparation of technical documentation for navigation and radio installations, bridge arrangements and antenna plans. They use their rich experience and skills to fulfil requirements of the ship operators as well as regulations of marine authorities and classification societies.

Shore-Based Maintenance (SBM) contracts

Shore Based Maintenance depending on the mandatory IMO SOLAS GMDSS regulation and radio maintenance guidelines. Mandatory annual surveys, annual health inspections and equipment inventory with the purpose to be proactive and avoid delays as a result of failure in equipment. Our agreements are adjusted to the particular needs of single vessel or extensive fleet.
